

## Relay Judging Platform Strap Adjustment and Replacement Instructions

Thank you for purchasing a relay judging platform (RJP, RJPL, or RJPLD) from Colorado Time Systems. This instruction sheet describes how the straps are assembled and how to replace them if necessary.

**Parts:** With a new RJPLD you receive all the parts shown in Figure 1. The RJPLD is shipped with the straps fully assembled but the straps may come apart during shipping. Use this diagram to feed the straps through the proper metal fasteners and for strap replacement. If you are missing any parts or have questions, please call our customer service department at 800-287-0653 or 970-667-1000.

### Strap Adjustment Instructions

When you receive a new RJPLD, you must adjust the straps to fit your starting platform.

1. Detach the hook from the buckle.
2. Place the RJPLD on the starting platform with the front of the RJPLD (the part with the bend) hanging over the front end of the block.
3. Adjust the fasteners at the positions marked “A” in the above drawing to allow the hook to reattach to the buckle.
4. Attach the hook to the buckle.
5. Pull on the strap at the position marked “B,” to tighten the strap assembly.
6. Apply tension until the straps are tight. Then flip the buckle to secure the RJPLD in place.

**Note:** After the initial setup to fit the RJPLD to your starting platform, you should not need to re-adjust the fasteners at the point marked “A.” You will only need to tighten the strap by pulling on the position marked “B,” then secure the buckle in place.

To lengthen the life of your RJPLD and the straps, do not leave the RJPLD strapped to your starting platform while not in use.
