

Virtual Meet Software Solution

TWO POOLS. ONE MEET.

As we are all well aware, our sport was significantly impacted recently, and the ability for athletes to be in the water has been limited; nonetheless compete. This solution was designed as a way to facilitate dual meets at two separate facilities and share real-time data between the two sites for the ultimate experience in virtual competition.

Currently, this opportunity is exclusive to customers that have both CTS Timing equipment (SYS5, SYS6, or Gen7) and a CTS video display with DisplayLink plus software.

Here's how it works:

The Virtual Meets system allows scoreboard data (times, places, athlete names, etc.) from two pools to be shared in real time via Cloud services operated by CTS. Essentially, it allows for two pool racing where the two pools are located in different physical facilities.

Each facility runs the Virtual Meet Client software which takes local timer data and passes it to both the local video board and to the Virtual Meet Server. The Virtual Meet Server then relays that data to the other pool where it is received by the Virtual Meet Client and passed to the local video board. Data can be displayed using fully-customizable templates in DisplayLink Plus. If you already have two-pool templates, we even provide a converter to adapt those templates for virtual meet usage.
