

Water Polo Horn

The Water Polo Horn should be mounted to any flat wall surface close to the scoreboard. The driver cord that attaches to the scoreboard is approximately 15-ft in length. It is also possible to mount the horn directly under the scoreboard using the pre-drilled holes in the top of the horn bracket. The horn will sound with scoreboard data received from the System 5 or System 6 timing console.

Always mount the horn a safe distance from the pool edge.
